| EURNZD | vs | NZDJPY | -0.66 | -0.56 | -0.59 | 100% |

## GA: groups that move opposite

A genetic algorithm searched ~2,100 combinations of 1-3 pairs vs
**2017-21**; each pick re-checked on **2022-26**, which the GA never sa

| Group A | | Group B | 201 |
|---|---|---|---|
| AUDUSD + CADCHF | vs | EURAUD + USDCAD | -0 |
| CADCHF + NZDUSD | vs | EURNZD + USDCAD | -0 |
| CADCHF + NZDUSD | vs | AUDNZD + EURAUD + USDCAD | -0 |
| CADCHF + GBPUSD | vs | EURGBP + USDCAD | -0 |
| AUDCHF | vs | EURAUD | -0 |
| GBPCHF | vs | EURGBP | -0 |

## Why they move opposite

The two pairs share one currency, but on **opposite sides** of th

```
EURAUD - AUD is the 2nd currency
AUDCHF - AUD is the 1st currency
```

When AUD strengthens, EURAUD falls and AUDCHF rises. The shared currency's own moves (USD, EUR, AUD, NZD, CHF), the mirror.

Groups mirror better than single pairs because averaging two the currencies that are *not* shared.

## How to use it

- **Confirmation:** EURUSD breaking up should come with USDCHF breaking down. If the mirror pair does not follow, the move is weaker.
- **Risk:** long EURUSD + short USDCHF is nearly the SAME trade twice - count it as double size, not as two positions.
- **Not a free hedge:** buying both sides mostly cancels out while you pay two spreads and two swaps.
- **Relationships drift:** GBPUSD vs CADCHF went from 0.00 to -0.31 in 2024-26. Re-run `ml/fx_opposite.py` every few months.
